Creating and Preparing CDR Vector Files for Laser Cutting

Designing Your Vector File

To ensure successful laser cutting, your CDR vector file should be carefully designed:

- Use separate layers for different cut types (cut lines, engravings, etching).
- Set the correct stroke color and width to differentiate cut paths.
- Keep designs simple and avoid overlapping lines unless intentional.
- Use high-contrast colors to distinguish different operations.

Optimizing Files for Laser Cutting

Before sending your CDR file to the laser cutter, perform the following optimizations:

- **Check Line Thickness:** Ensure cut lines are set to a specific stroke width (often 0.001 inches or 0.025 mm) to signify cut paths.
- **Set Proper Line Colors:** Use distinct colors for different operations, e.g., red for cutting, blue for engraving.
- **Remove Unnecessary Elements:** Clean up stray points, unused layers, or hidden objects.
- **Convert Text to Curves:** To prevent font issues, convert all text to vector curves.
- **Adjust for Material Thickness:** Consider kerf (material removal by laser) to ensure accurate final dimensions.

Exporting CDR Files for Laser Cutting

Depending on your laser cutter's compatibility, you may need to export your CDR file into other formats:

- **DXF or DWG:** Widely accepted for CNC and laser cutters.
- **SVG:** Suitable for many laser engraving machines.
